Four-dimensional space - Wikipedia A four-dimensional space or 4D space is a mathematical extension of the concept of three-dimensional or 3D space. Three-dimensional space is the simplest possible generalization of the observation that one only needs three numbers, called dimensions, to describe the sizes or locations of objects in the everyday world. Four-Dimensional Geometry -- from Wolfram MathWorld Four-Dimensional Geometry Four-dimensional geometry is Euclidean geometry extended into one additional dimension . The prefix "hyper-" is usually used to refer to the four- (and higher-) dimensional analogs of three-dimensional objects, e.g., hypercube , hyperplane , hypersphere. The Fourth Dimension and Non-Euclidean Geometry in Modern ... In this groundbreaking study, first published in 1983 and unavailable for over a decade, Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception—the curved spaces of non-Euclidean geometry and, most important, a higher, fourth dimension of space—were central to the development of modern art.

The Fourth Dimension: Toward a Geometry of Higher Reality ... The fourth dimension is to three-dimensional space as the third dimension is to two-dimensional space. 4-D:3D::3-D:2-D. This particular analogy is one of the oldest head tricks known to man. Plato was the first to present it, in his famous allegory of the cave.

History of Thought: Four Dimensional Geometry Also, the idea that three-space may be curved implies that it is lying in some other dimension—a fourth dimension. Towards the end of the century, the number of books, memoirs, and papers on geometry of four or more dimensions increased dramatically. Geometry, Relativity and the Fourth Dimension - Dover Books Following this adventure into the fourth dimension, the author discusses non-Euclidean geometry, curved space, time as a higher dimension, special relativity, time travel, and the shape of space-time. The Fourth Dimension - Definition in Art History However, several hundred years ago physicists and mathematicians postulated a fourth dimension. Mathematically, the fourth dimension refers to time as another dimension along with length, width, and depth. It also refers to space and the space-time continuum.
