For the mathematically persistent the following website has an intriguing new approach to attacking the problem of constructing a new algorithm for solving the problem, and trying to reduce the reliance on a computer.

Four-Color Theorem -- from Wolfram MathWorld The four-color theorem states that any map in a plane can be colored using four-colors in such a way that regions sharing a common boundary (other than a single point) do not share the same color. This problem is sometimes also called Guthrie's problem after F. Guthrie, who first conjectured the theorem in 1852. The conjecture was then communicated to de Morgan and thence into the general. Four-colour problem - Encyclopedia of Mathematics Can the regions of an arbitrary planar map (cf. Graph, planar) be coloured by four colours in such a way that any two adjacent regions are coloured with different colours? The conjecture that the answer to the four-colour problem is affirmative was formulated in the 19th century. The Four Color Theorem The Four Color Theorem. This page gives a brief summary of a new proof of the Four Color Theorem and a four-coloring algorithm found by Neil Robertson ... Kempe chains and the four colour problem", in Studies in Graph Theory, Part II (ed. D. R. Fulkerson), Math. Assoc. of America, 1975, 378-413.

The Four Color Theorem - MathPages The Four Color Theorem: How many different colors are sufficient to color the countries on a map in such a way that no two adjacent countries have the same color?.
